draft-ietf-ecrit-additional-data

BRIAN ROSEN

HANNES TSCHOFENIG

Purpose

- Carry data known by devices and service providers to PSAPs in emergency calls
- Carries
  - Service provider ID and contact info
  - Service provider service info
  - Device info (including hook for sensor data)
  - Subscriber Info

This version provides three mechanisms to carry the data

- Call Info header with https URI pointing to XML data structure

- Retrieve with GET

- Call Info header with CID (like location-conveyance) to put data in body

- New Provided-By scheme for PIDF-LO (access network data)

Data Structure redo

- Now a set of MIME types (wrapped in mime-multi-part of course) for each block of data
- Any set of these blocks can be included in the data
- No real change to the data itself, just a syntax change
- Comments welcome on what blocks are there
