ERP/AAK
draft-ietf-hokey-erp-aak-04

Glen Zorn
Network Zen

Problems

- Changes to support single CAP only incomplete
- In general not feasible for the home ERP/AAK server to either authenticate or authorize the CAP
  - Roaming
- NAS-Identifier (as defined) not guaranteed to be unique across realms
- AAA operation under specified
  - Diameter only
- Many typos remain

Questions

- Why key hierarchy different from ERP?

  - What is gained?

- Why not just an extension to ERP?

  - RFC 5296bis
