IPv6 RADIUS attributes for IPv6 access networks draft-ietf-radext-ipv6-access

Glen Zorn, Benoit Lourdelet Wojciech Dec, Behcet Sarikaya, David Miles

Radext WG group
IETF 81

Status

- All issues raised in WG-last call resolved as proposed.
- One new attribute added: stateful-ipv6address-pool.

Stateful-ipv6-address-pool

- Needed to resolve ambiguity between SLAAC/DHCP-PD and DHCP IA_NA pools, all of which have different scopes.
- This Attribute contains the name of an assigned pool that SHOULD be used to select an IPv6 address for the user. If a NAS does not support address pools, the NAS MUST ignore this Attribute. A summaryof the Stateful-IPv6-Address-Pool Attribute format is shown below.

Next step

- A quick WG Last Call
- · Move on to IESG review.

Thank You!
