Report from W3C TPAC

Harald Alvestrand

Logistics

- October 30 - November 31, 2011
- W3C's yearly "common WG meeting" - this time, Santa Clara, California
- 2 full days of meeting time for RTCWEB
- Some information sharing with other groups
- 30-odd people present

Topics and discussions

- Security
- DAP interaction over GetUserMedia
- Access control user interactions
- Hints and Statistics
- Data Streams - API presentation
- Media Streams - definition
- Audio

http://www.w3.org/2011/04/webrtc/wiki/Santa_Clara_F2F_Summary

Important Conclusions

- Split off GetUserMedia into a separate spec
  - DAP WG wants to review it
- MediaStream track list is not immutable
  - Tracks may come and go during stream lifetime
- Data API reflects protocol chosen by IETF
  - Some unclear issues, will work out on list
- Hints and Statistics as key/value lists
  - Hints (like music vs speech) to influence configuration
  - Aim to have easy extensibility of hints list
  - Statistics to be defined - informed by XR work in IETF

Spec Status

- WG declared "First Public Working Draft" status on October 27
- Triggers 90-day "IPR exclusion" period
- Does not imply stability
- Editors' draft continues to change on a weekly basis

We're Doing Fine!
