VIPR Overview

Changes since   -01:

1.   Editorial changes.
2.   Clarifications to re-enforce that the primary objective is not
      PSTN bypass but rather to enable enhanced services such as video
      between domains. Changed "VoIP" to "SIP" since the focus is not
      specifically voice.
3. Added reference for new framework document.
4. Section 5.3: Added references to other documents as appropriate
      - e.g., -pvp, -spam, etc.
5. Moved validation diagrams and text (from 5.3.4) into Validation
      and caching section (5.3.3).
6. Condensed discussion of spam in section 5.3.3 and updated SPAM
      section in security section.

VIPR Overview

Way Forward:

- Need WG review

- In particular, security section needs additional consideration – is it complete?

- Adopt as a WG document?
