

draft-ietf-dnsext- rfc1995bis-ixfr-00

Alfred Hoenes, Ondrej Sury, Shane Kerr

Motivation

- IXFR Clarification
- Adding IXFR-ONLY option

Clarification

- Need first identified in 1999
 - (<http://goo.gl/wG4LU>)
- Corrected some technical flaws
 - See Appendix B for a full list
- Already done for AXFR (RFC5936)
 - This draft is based on that
- Feedback from implementors welcome

IXFR-only

- IXFR fallbacks to full zone when it doesn't have the needed differences
- IXFR-only prevents that fallback and refuse to send full zone back
- Minor change in last draft:
 - Send full zone if it fits into single response packet over UDP

Adopted as WG document

- Need reviewers!
- Who is willing to work on this?
