Bundle Protocol
Application Framework

DTNRG, IETF 83

draft-blanchet-dtnrg-bp-application-framework-01

Marc Blanchet
marc.blanchet@viagenie.ca

In a nutshell

- BP payload formats are not currently mapped to any service identifier (both dtn : or ipn :)

- No global service identifier registry to make interoperable : implementations and deployments

- Proposed :

  - IANA registry for service identifiers (both dtn and ipn), with CCSDS allocated range, with pointers to reference of the BP payload format specification.

  - BP applications template for specifying BP payload format and request for registry entry.

Since -00

- -00 presented during IETF 81.
- Comments from IETF 81 (hopefully) addressed
- WG adoption?
