IPsecME WG 2012-03-26

IANA Issue in IKEv1 ipsec-registry

Tero Kivinen <kivinen@iki.fi>
AuthenTec

http://www.iana.org/assignments/ipsec-registry

ipsec-registry & isakmp-registry

- ipsec-registry
  - IKEv1 registry covering the IKEv1 part
  - Went through it earlier and changed lots of registration procedures to match RFCs
  - One open issue
    - IPSEC Authentication Methods (Value 3)
- isakmp-registry
  - Registry covering IPsec parts
  - I have not yet checked it
- The whole IKEv1 & IPsec-v2 IANA registry is a mess

ipsec-registry

- IPSEC Authentication Methods (Value 3)
    - Currently "Standard-Track RFC"
    - Nothing in the RFCs to justify that
    - Wanted to change to "Specification required" as all other similar registries
    - Some objections
- Compromise:
    - Change to to "IETF Review" (RFC5226)
- Way forward:
    - Will send email to list
    - If no objection in 2 weeks, I will ask IANA to make the change
