One more loop for loopback

draft-ietf-mmusic-media-loopback-18

Current State of Draft

- 71 comments were received in WGLC
  - 34 Editorial, 37 Technical

- Draft-17 was uploaded 2 weeks ago, which covered the 34 editorial comments from WGLC

- Draft-18 was uploaded Sunday, which covered *almost* all of the 37 technical comments
  - Use tools page to view diffs from draft-17

What wasn't resolved?

- Some technical comments were not document changes:
  - Example: "needs to reviewed by the ietf-types@iana.org mailing list"
- Some are actions for WG Chairs (?)
  - Example: "reduce # of authors"

- I am only the current editor – do I do the above?

Big changes

- I believe the biggest technical change was removing the codec type list from the loopback-source/loopback-mirror attributes
  - I.e., from this:

    `a=loopback-source:0 8`
  - To this:

    `a=loopback-source`

Next steps

Issue another WGLC now, or wait two more weeks and issue one then?
