RELOAD Interoperability Testing

Marc Petit-Huguenin
03/28/2012

Status

- 5 participants.

- 3 RELOAD node implementations + Wireshark RELOAD dissector.

- Technical issues prevented testing on the first session.

- All participants agreed to continue remote testing.

Future

- Thinking of having an interop event in North America before the end of the year, and the next one in Berlin, Germany in July 2013.

- Internet connectivity is a MUST for such an event.

- We really need to find a simpler way to decrypt (D)TLS traffic in Wireshark.
