

XMPP Address Format

(draft-ietf-xmpp-6 | 22bis-00)

Peter Saint-André
XMPP WG
IETF 83, Paris

Open Issues (I)

- Normalization: are we all OK with NFC?
- Domainpart: MUST convert A-labels to U-labels? (currently a SHOULD)
- Resourcepart: re-use PRECIS FreeClass, or do codepoint-for-codepoint comparison?
- Define nickname profile for chatrooms? (see draft-saintandre-precis-nickname)

Open Issues (2)

- How to handle full-width / half-width code points? (see draft-yoneya-precis-mappings)
- Do we need to better specify the handling of `il8n`-related errors?
- Should we define suggested "registrar-like" policies for servers?

Open Issues (3)

- Enforcing the rules...
- Clients as well as servers?
- Server enforcement...
 - c2s connections only?
 - or also s2s connections?
