Definition of Managed Objects for Battery Monitoring

draft-ietf-eman-battery-mib-05

T. Dietz, J. Quittek, R. Winter

Since the last meeting

- We have been hoping for input on the outstanding open issues
  - 1. Time estimations
    - Things like AtRateTimeToFull, AtRateTimeToEmpty…
  - 2. Capacity reduction per time
    - another measure of aging and battery quality
  - 3. Internal impedance
    - Do we need this?
  - 4. Wireless charging
    - Anything special about wireless charging (e.g. new states)
  - 5. Entity MIB augmentation
    - We're basically waiting for this to happen now

Next steps

- Open issues have been reposted on the list
- Authors will make suggestions to resolve the open issues if no feedback comes in
- After that the document is believed to be done and will only need to wait on the Entity MIB changes
