

Options 1 & 2

```
<Reference>
```

```
  <ReferenceName> x </ReferenceName>
```

```
  <URL>http://www.example.com/path</URL>
```

```
  <URL>http://www.otherexample.com/path</URL>
```

```
  <Description>Description</Description>
```

```
</Reference>
```

- 1: **id** Register identifier convention using an IANA table
- 2: **id_type:id** Register identifier types using an IANA table.

Option 3

```
<Reference registryId="id_type">  
  <ReferenceName>id</ReferenceName>  
  <URL>http://www.example.com/path</URL>  
  <URL>http://www.otherexample.com/path</URL>  
  <Description>Description</Description>  
</Reference>
```

NOTE: This option "opens" IODEF,
and can still leverage IANA table
for identification type.
