draft-ietf-ecrit-additional-data-05

Brian Rosen
Hannes Tschofening
Roger Marshall

Reminder of what this is

- Way to get data from service providers and devices into a PSAP (and then to responders)

- Contains
  - SP ID, contact and "class of service" data
  - Subscriber data
  - Device data
  - Hook for device/service specific data

- Comes in
  - Call Info header in SIP (or cid, with data in body) for device or origination SP data
  - Provided-by element of PIDF for access SPdata

Changes from prior version

- Updates due to suggestions from NENA
  - Mostly documentation inconsistencies, no actual mechanism change

- Updates from Randy Gellens
  - Also mostly documentation inconsistencies, language suggestions, …

- Change to multiple CID URIs instead of links

- Change from vCard to xCard

What's next

- WGLC!
