

PRECIS Open Issues

(framework, nickname, xmpp, saslprepbis)

Peter Saint-Andre
PRECIS WG
IETF 85, Atlanta

General Issues

- Need to finish code for automated generation of the codepoint tables
- Need to do more comparative testing (output of stringprep + Unicode 3.2 vs. output of PRECIS + Unicode 6.2)

draft-ietf-precis- framework-06

- Require application protocols to define width mapping?
(Not necessary if using NFKC, but helpful otherwise. Would be at same level as normalization and case mapping.)
- Are the IANA registration templates sensible?

draft-ietf-precis- nickname-04

- No open issues

draft-ietf-xmpp- 6 | 22bis-06

- No open issues

draft-melnikov- saslprepbis-04

- Need more implementer feedback (both SASL itself and SASL-based protocols)
- Adopt as WG item?
