Lessons to learn from the Codec WG Charter

Cullen Jennings <CODEC WG Co-Chair>
IETF85

If I could do it all over again ...

1. Don't use source code as a normative spec

2. Be clear about "optimized for internet"

3. Better plan for Liaisons with other SDOs - particularly existing Joint *

4. Sort out preferred IPR licensing terms early

5. Be clear about targets for coding efficiency

6. Decide if you are doing one codec or many

7. Have a strategy for achieving RF

8. Be clear if WG is creating new technology or selecting existing technology

9. Use signalling to have fine grain enablement of features

10. Have a clear idea how to get test results to inform WG decisions
