Apology

- Apparently the draft was only announced on the 6man list – not the 6lowpan list
 - Caused by mail address filtering issue ☹️

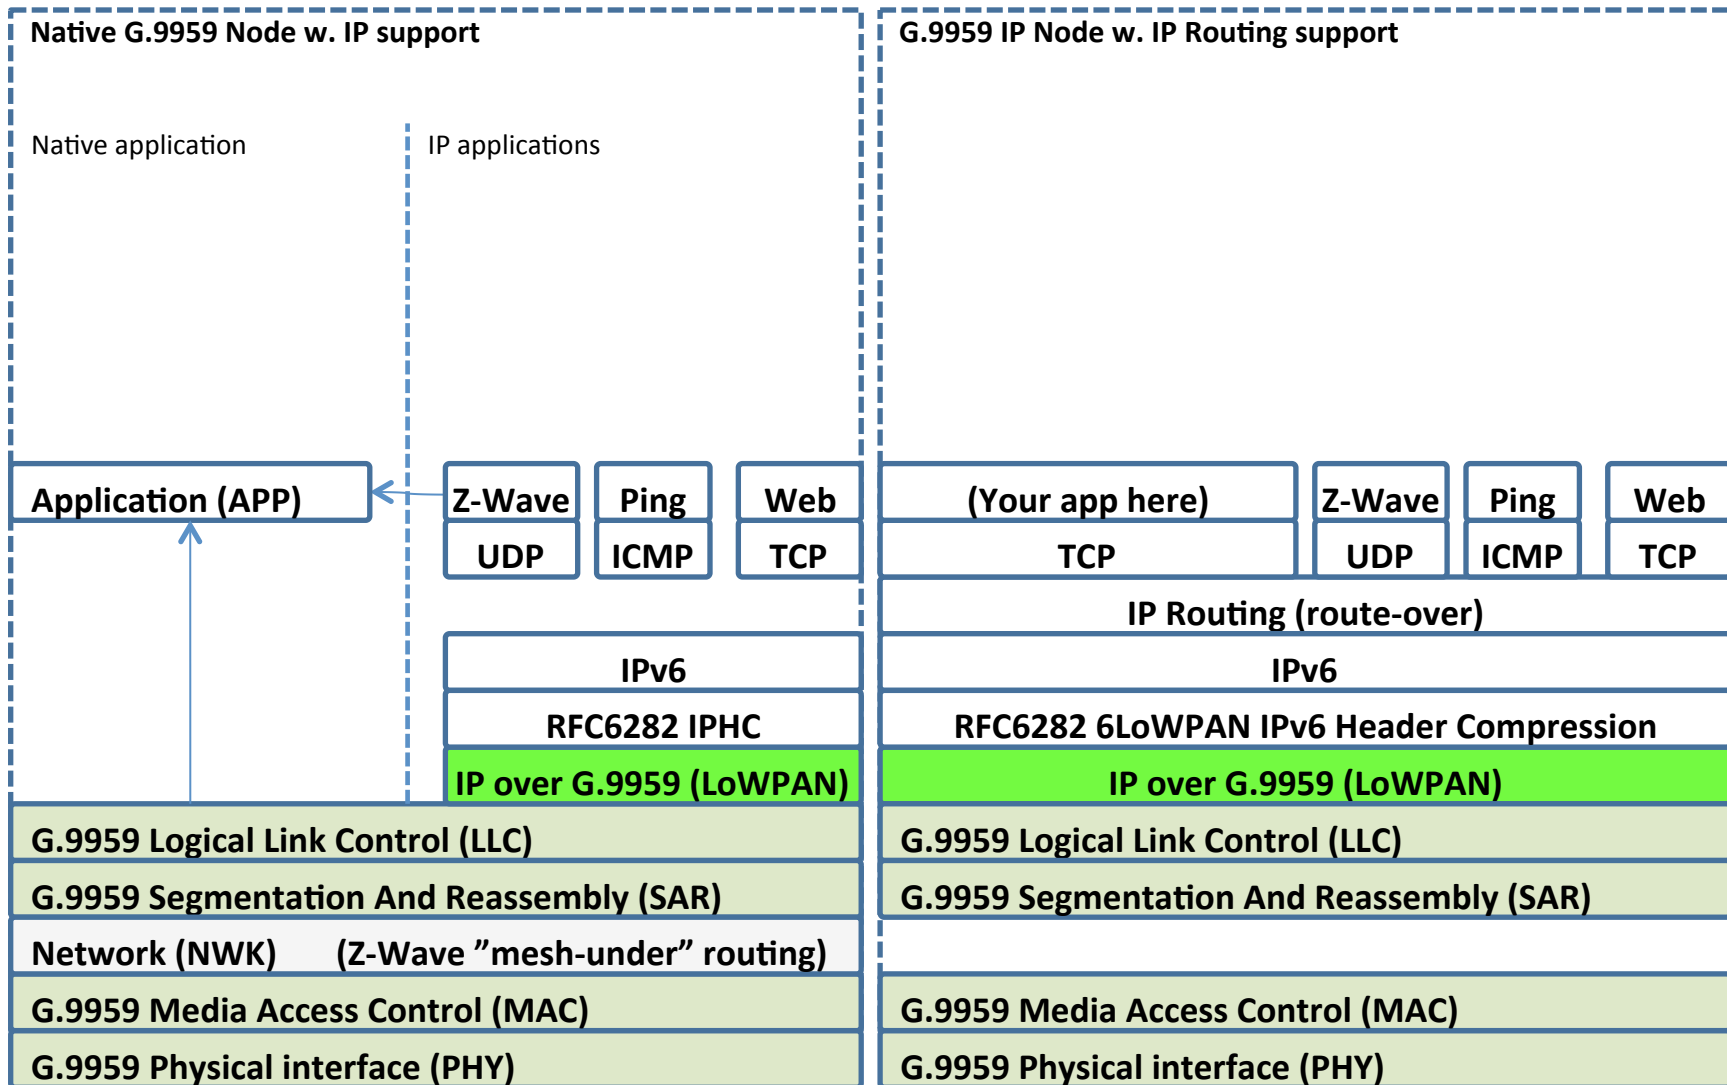

draft-brandt-6man-lowpanz-00

IPv6 over G.9959 – the stack

draft-brandt-6man-lowpanz-00

IPv6 over G.9959 – the stack

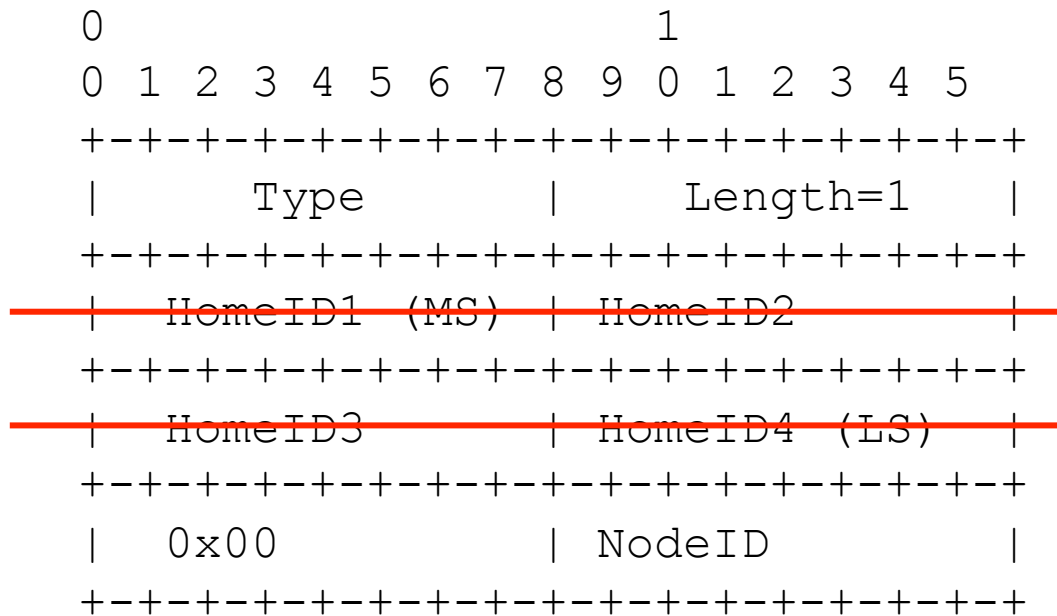

Comments to work out

- RFC4944 vs. RFC6775 6LoWPAN ND
 - More details needed. No real issues.
 - Emphasize coupling to RFC6282
- RFC4861 Source/Target Link-layer Address
 - Simply remove the network ID portion (HomeID)
- Status indications to higher layers
 - “MUST” req. conflict with classic IP model

RFC4861 Source/Target Link-layer Address

- Removing the network ID portion (HomeID)

Going forward

- Adoption as WG document?
