

# -additional-data

**BRIAN ROSEN, NEUSTAR**

# Summary

- Call-Info header with URI to external database/CID or <provided-by> in PIDF-LO
- Data known by SP (access or origination), device, or 3<sup>rd</sup> party in the call path
- Comes as a series of blocks with different types of data
- Latest version cleans up and clarifies how blocks work in all transport forms

# Open Items

- Extension points on XML data items
- Two ways to handle device-specific data
  - New Block
  - URI and type (with registry) in device block

And I think we're done
