

-data-only

BRIAN ROSEN, NEUSTAR

Suggested re-scoping this doc

- Data is needed for calls that don't have media (data only) and calls that also have media
- Obviously would like the data to be handled similarly in both cases
- Update of data could be done twoways
 - reINVITE or new MESSAGE (source controlled)
 - SUB/NOT (PSAP controlled)
- Authors proposed to rework data-only to cover all of this
- Several commenters objected

Current doc retains same scope

- Defines CAP alert in SIP BODY
- Allows this to be in any SIP transaction, but only defines meaning for MESSAGE

We will submit new -00 drafts to

- Define use with INVITE when media is present
- Define SUB/NOT for updates
