

Emergency rph namespace follow-up

- IESG has approved emergency-rph as an Informational
- RFC4412 requires standards track to define a new rph namespace
- This was a mistake: emergency-rph only defines a namespace, and doesn't define any new protocol semantics
- IESG objected, and we agreed to fix
- draft-rosen-rph-reg-policy is a very short doc that changes the IANA policy to “IETF Review”
- Simultaneous request to adopt and WGLC in sipcore under way
