JSON DOCUMENT UPDATE (RFC 4627)

IETF 86 Orlando
March 2013
Cyrus Daboo

PROPOSED CHANGES #1

- Update status to Proposed from Informational

  - We have many groups within the IETF making use of JSON in various ways in proposed standards. We need the JSON base spec to also be a Proposed standard.

PROPOSED CHANGES TO #2

- Fix one editorial errata (ABNF indentation).

- Any other errata/editorial issues can be considered.

PROPOSED CHANGES TO #3

- Determine whether the text describing how to deal with duplicate object member names needs to amended.

- Some options have been discussed:

  - Change 'SHOULD be unique' to 'MUST be unique'.

  - Leave SHOULD as-is but state only the last member name is used (as per ECMAScript 5).

  - Make no change at all.
