Using Only Link-Local Addressing Inside an IPv6 Network
draft-ietf-opsec-lla-only-03

Michael Behringer
Eric Vyncke

Summary
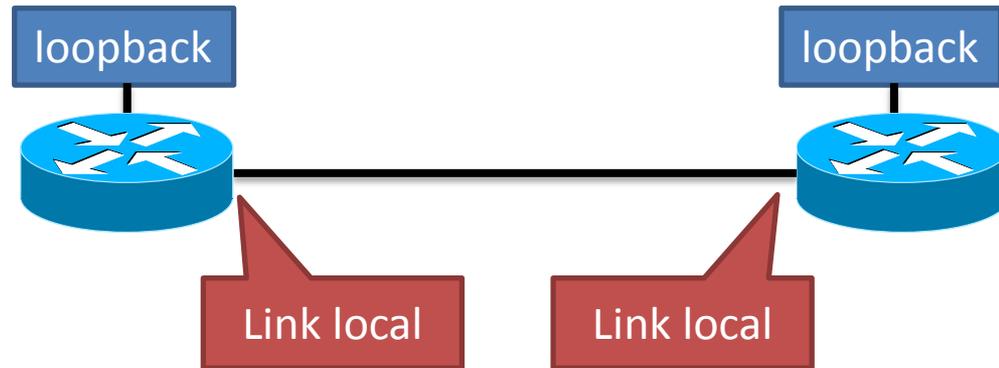

- Discussion: Neither global nor ULA addresses on infrastructure links, **just link-local**

- Describe pros and cons

- Goal: Help in decision process.

- Desired outcome: **Informational**

Changes in -03

- Intro: Weakened claim from "[link-local only] significantly eases" to "may ease" protection measures.

  - Added some explanatory text.

- In caveats, hardware dependencies: explained that when you configure LL addresses, configuration effort is the same as normal.

Summary

- Document stable
- We addressed all comments
- Not aware of open issues/concerns

- Would like to move to WGLC
