

OSPF WG Update on TE Metric Extensions Draft

- Adds delay, delay variation, link loss, residual bandwidth, and available bandwidth to RFC 3630 TE metrics.
- Scope of draft is description of values and advertisement of information. Queue delay recently removed.
- Measurement could, for example, follow RFC 6374 and RFC 6375.
- Much discussion on scope in ISIS WG in Atlanta
- As WG Member – Have no problems with draft or guidance for metrics. Document is well written.
- Questions for WG and ADs:
 - Further discussions required and which list?
 - Standards Track or Experimental (Former preferred)
