Mapping characters
for PRECIS classes
draft-ietf-precis-mappings-01
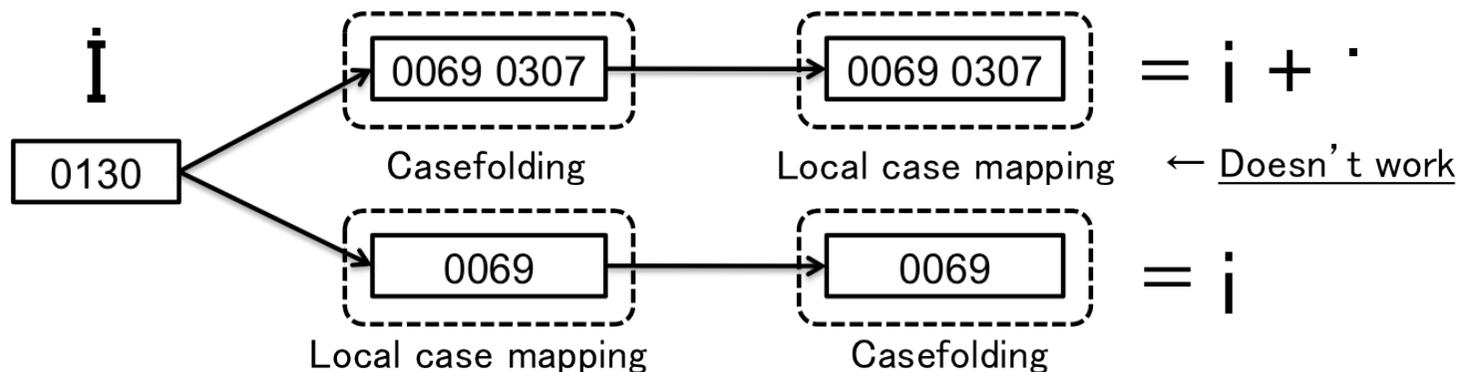

Takahiro NEMOTO

t.nemo10@kmd.keio.ac.jp

Keio University

Changes from -00 to -01

- -01 modified the Section 4.3 "Local case mapping" to specify the method to calculate codepoints that local case mapping targets.

- -01 modified the "IANA Considerations" and removed the "The initial precis local case mapping registrations".

- -01 added the Appendix C "Code points list for local case mapping".

- -01 added the Open issues.

Open issues（1/2）

1. Does local case mapping belong to additional mappings in precis framework?

   – If yes, it's necessary to specify mapping order as local case mapping then case mapping.

     • **It makes no sense to perform local case mapping after case mapping.**

Authors' recommended solutions

– Additional mapping should be mappings which are not included in mappings document.

– Handling order is process(es) in mappings document, then processes in precis framework document.

Open issues（2/2）

2. Handling order of precis framework and precis mappings is ambiguous.

    –   Is it necessary to define the order in "precis framework or mappings document" or "both documents"?

> Authors' recommended solution
>
> –   The order should be defined in both documents.
