URL: <http://www.ietf.org/id/draft-ietf-mile-enum-reference-format-01.txt>

Abstract:

The Incident Object Description Exchange Format [IODEF] provides a Reference class used to reference external entities (such as enumeration identifiers). However, the method of external entity identification has been left unstructured. This document describes a method to provide structure for referencing external entities for the [IODEF] Reference class.

*IETF 87 - July/August 2013 - Berlin*

```
<Reference>
  <ReferenceName>
    <EnumRef>
      <Abbreviation>CXI</Abbreviation>
      <RegistryVersion>1</RegistryVersion>
      <ID>CXI-1234-XYZ</ID>
    </EnumRef>
  </ReferenceName>
</Reference>
```

Full Name: Concept X Identifier

Abbreviation: CXI

Registry Version: 1

Enumeration Version: any
