

# YANG-API From NETCONF Perspective

~~draft-bierman-netconf-yang-api-01~~  
IETF 87, July 2013

Andy Bierman  
andy@yumaworks.com

# Agenda

- YANG-API Status
- Relationship to NETCONF

# YANG-API Status

- draft-bierman-netconf-yang-api-01 is expired
  - Some people have asked if it will be republished
  - Some people indicated they were implementing it
- Plan is to republish some time in the future
  - Kent Watsen added as co-author
  - Low priority within WG at this time

# Relationship to NETCONF

- Operations: CRUDX model alignment useful
- Data model: both use YANG; same models
- Datastores: need to align even if YANG-API does not support access to specific datastores
- Meta-data: Should align features such as use of Entity Tags, conditional enablement
- Notifications: Unclear if YANG-API needs them or can support real push model
