draft-ietf-softwire-unified-cpe-01

IETF 87, Berlin
SOFTWIRE meeting
2013-07-30

M. Boucadair, I. Farrer, S. Perreault, S. Sivakumar

Status

- Since IETF 86, went from -00 to -01

- Recent discussion spread on many related drafts, not centered on unified-cpe

OPTION_MAP_BIND_DYN

- New sub-option of OPTION_MAP used to indicate to the client that it must attempt DHCPv4 over DHCPv6

Future expansion of the unified CPE model

- Central concept:
  - **The absence or presence of a configuration option is what defines the mode of operation**
- Counter-example:
  - The value of a configuration option MUST NOT affect the mode of opration

Next steps

- DHCP options continue to be refined, result of discussions to be captured in the unified-cpe draft

- Draft needs extenting to include work coming out of DHC (DHCPv4-over-DHCPv6 and dynamic IPv4 address leasing)

- Once those are included, draft will be ready to proceed
    - Standby until then
