FORCES PACKET PARALLELIZATION

IETF – 88 Vancouver

Evangelos Haleplidis (ehalep@ece.upatras.gr)

Joel Halpern (jmh@joelhalpern.com)

Document Status – One Issue

- Responded to all comments.

- One outstanding issue raised by Dave Hood (thank you!)

- Metadata Tunneling – Current Metadata Set (MS):
    - Parallel Type (Split/Flood)
    - Correlator
    - Parallel Number
    - Parallel Parts Number

Metadata Tunneling

- Metadata Tunneling – Possible solutions for Metadata Sets:
  - One current MS and a table of MSs + a depth index.
  - MS Table + a depth index. Current MS on top.
  - Add depth field to the MS. Allow multiple struct MSs to exist. Merger uses only MS with max depth.
  - Not allow nested parallel paths.

Conclusion

- Believe the document to be stable and in good shape.

- Request to be added to the charter and as working group item.
