

Topology API Use Cases

draft-amante-i2rs-topology-use-cases-01

Shane Amante

Jan Medved, jmedved@cisco.com

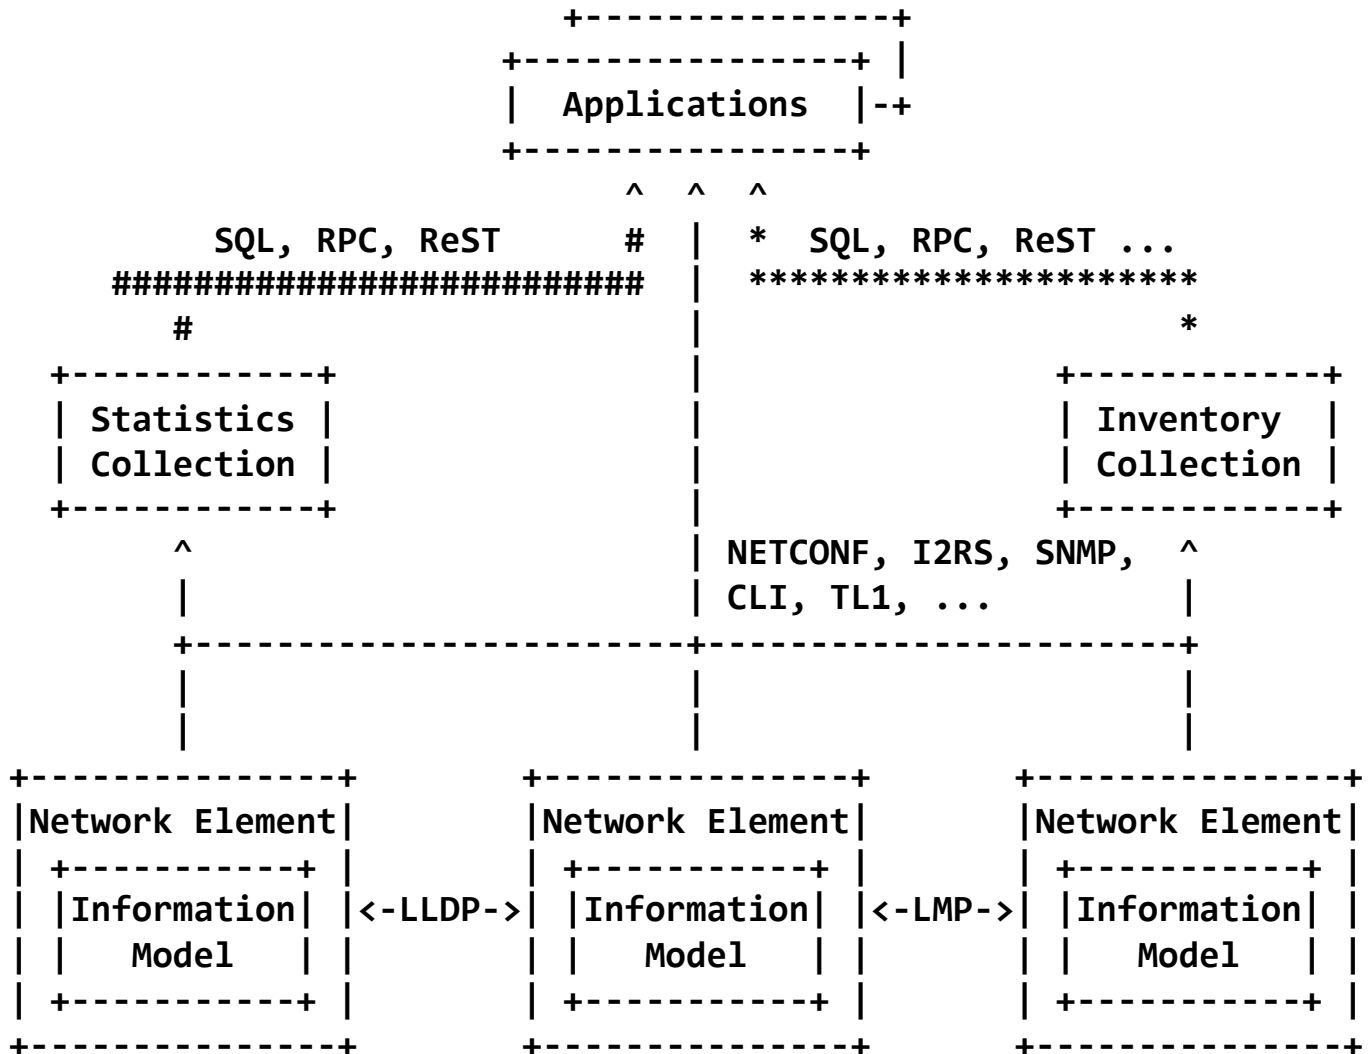

Stefano Previdi, sprevidi@cisco.com

Victor Lopez, vlopez@tid.es

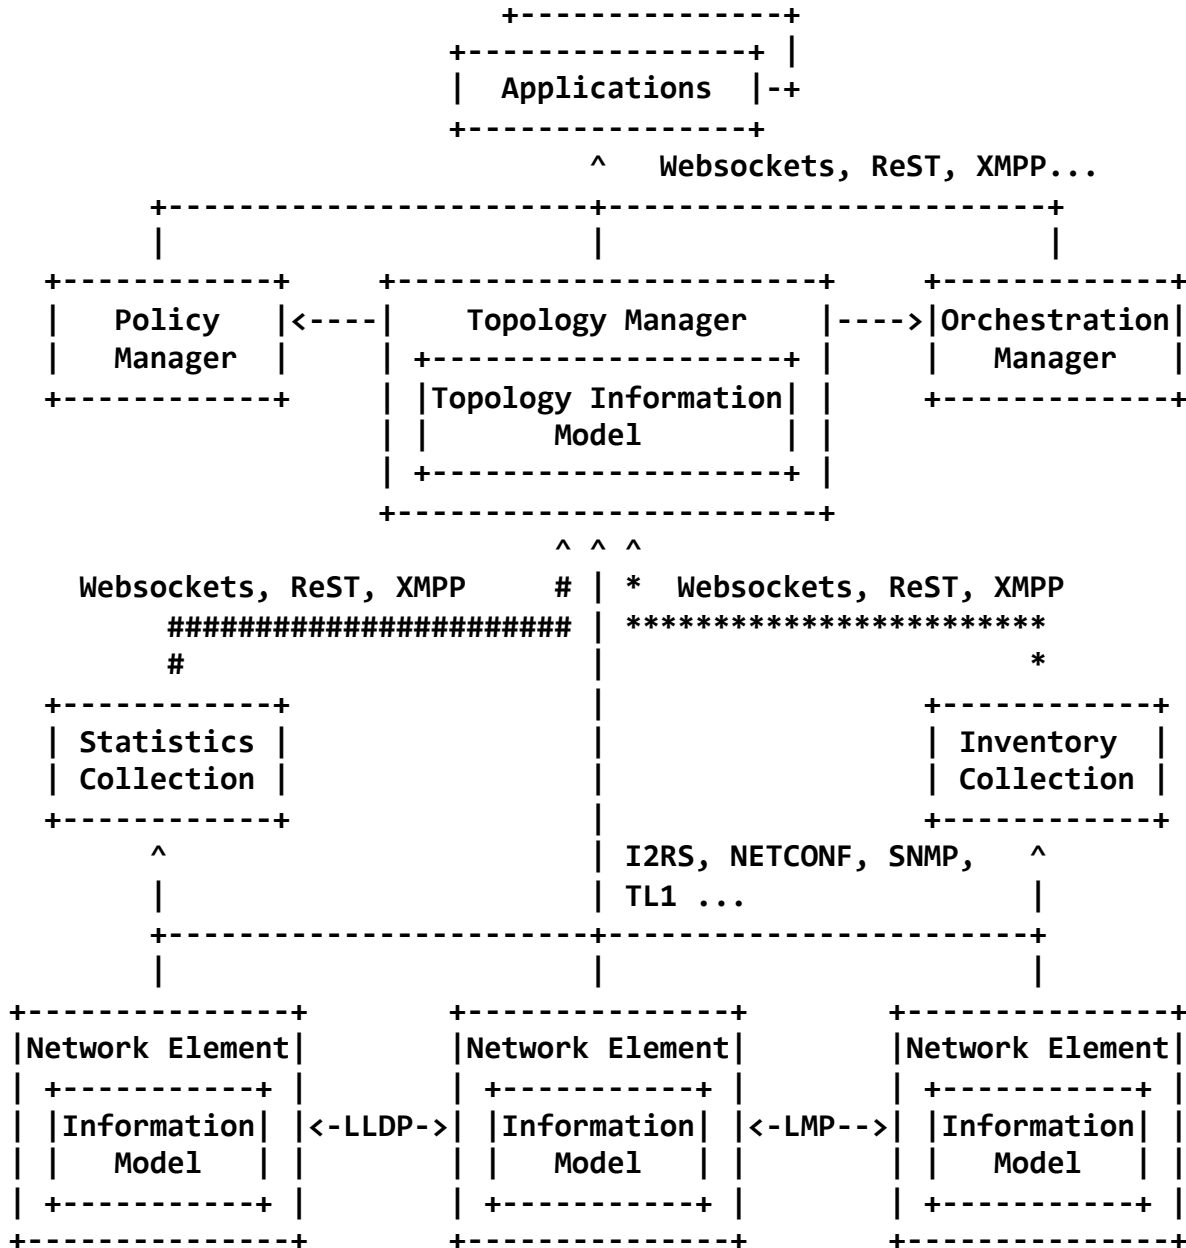

Changes Since Last Revision

- Text & terminology cleanup (e.g. info model instead of data model)
- Added the Virtual Network Topology Manager use case

Present Mode of Operation

The Topology Manager

Use Cases

- Capacity Planning & Traffic Engineering
- Virtual Network Topology Manager
- Services provisioning
- Path Computation Element
- ALTO Server

An Information Model for Network Topologies

draft-medved-i2rs-topology-im-01.txt

Jan Medved, jmedved@cisco.com

Nitin Bahadur, nitinb@juniper.net

Alexander Clemm, alex@cisco.com

Hariharan Ananthakrishnan, hanantha@juniper.net

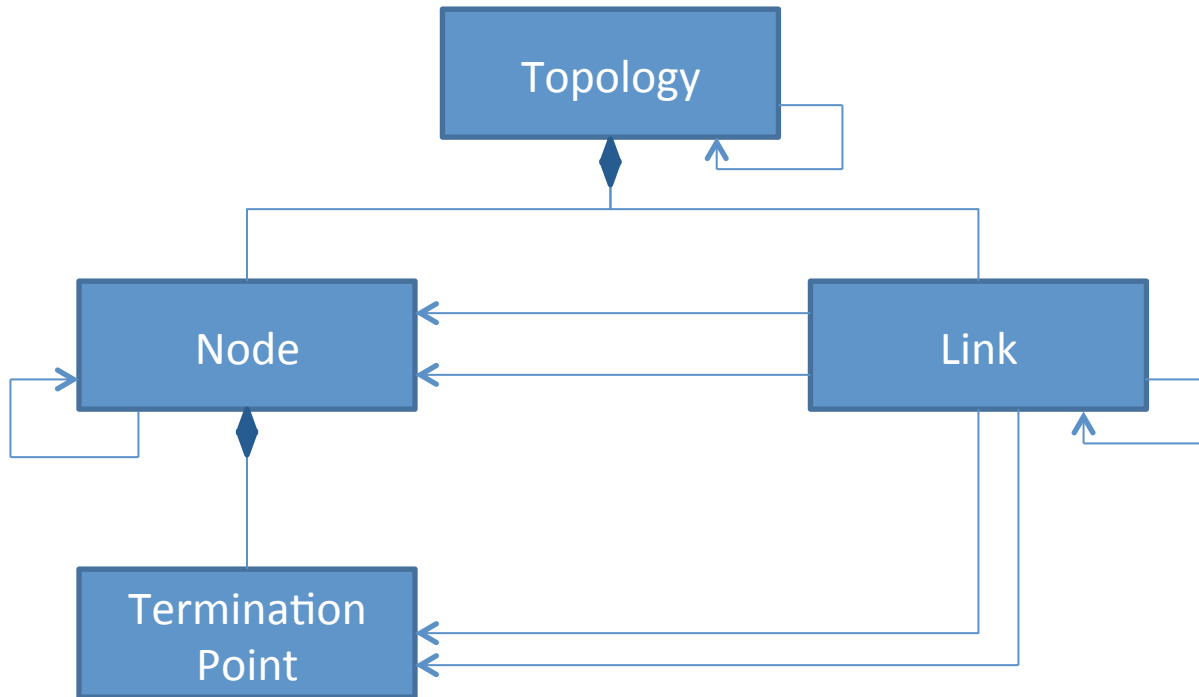

Purpose

- Information model for network topologies
- Generic topology model, extensions for specific topologies
 - L3 Unicast IGP, OSPF, IS-IS as part of this draft
 - Can be extended for other topologies
- Specified using RBNF
- Applications
 - Data nodes capture and reconcile their understanding of network topology, propagate topology info
 - Network controllers represent controller network topology
- Ask: Decide if network topology is in the WG's scope; if yes, adopt as WG item

Changes Since Last Revision

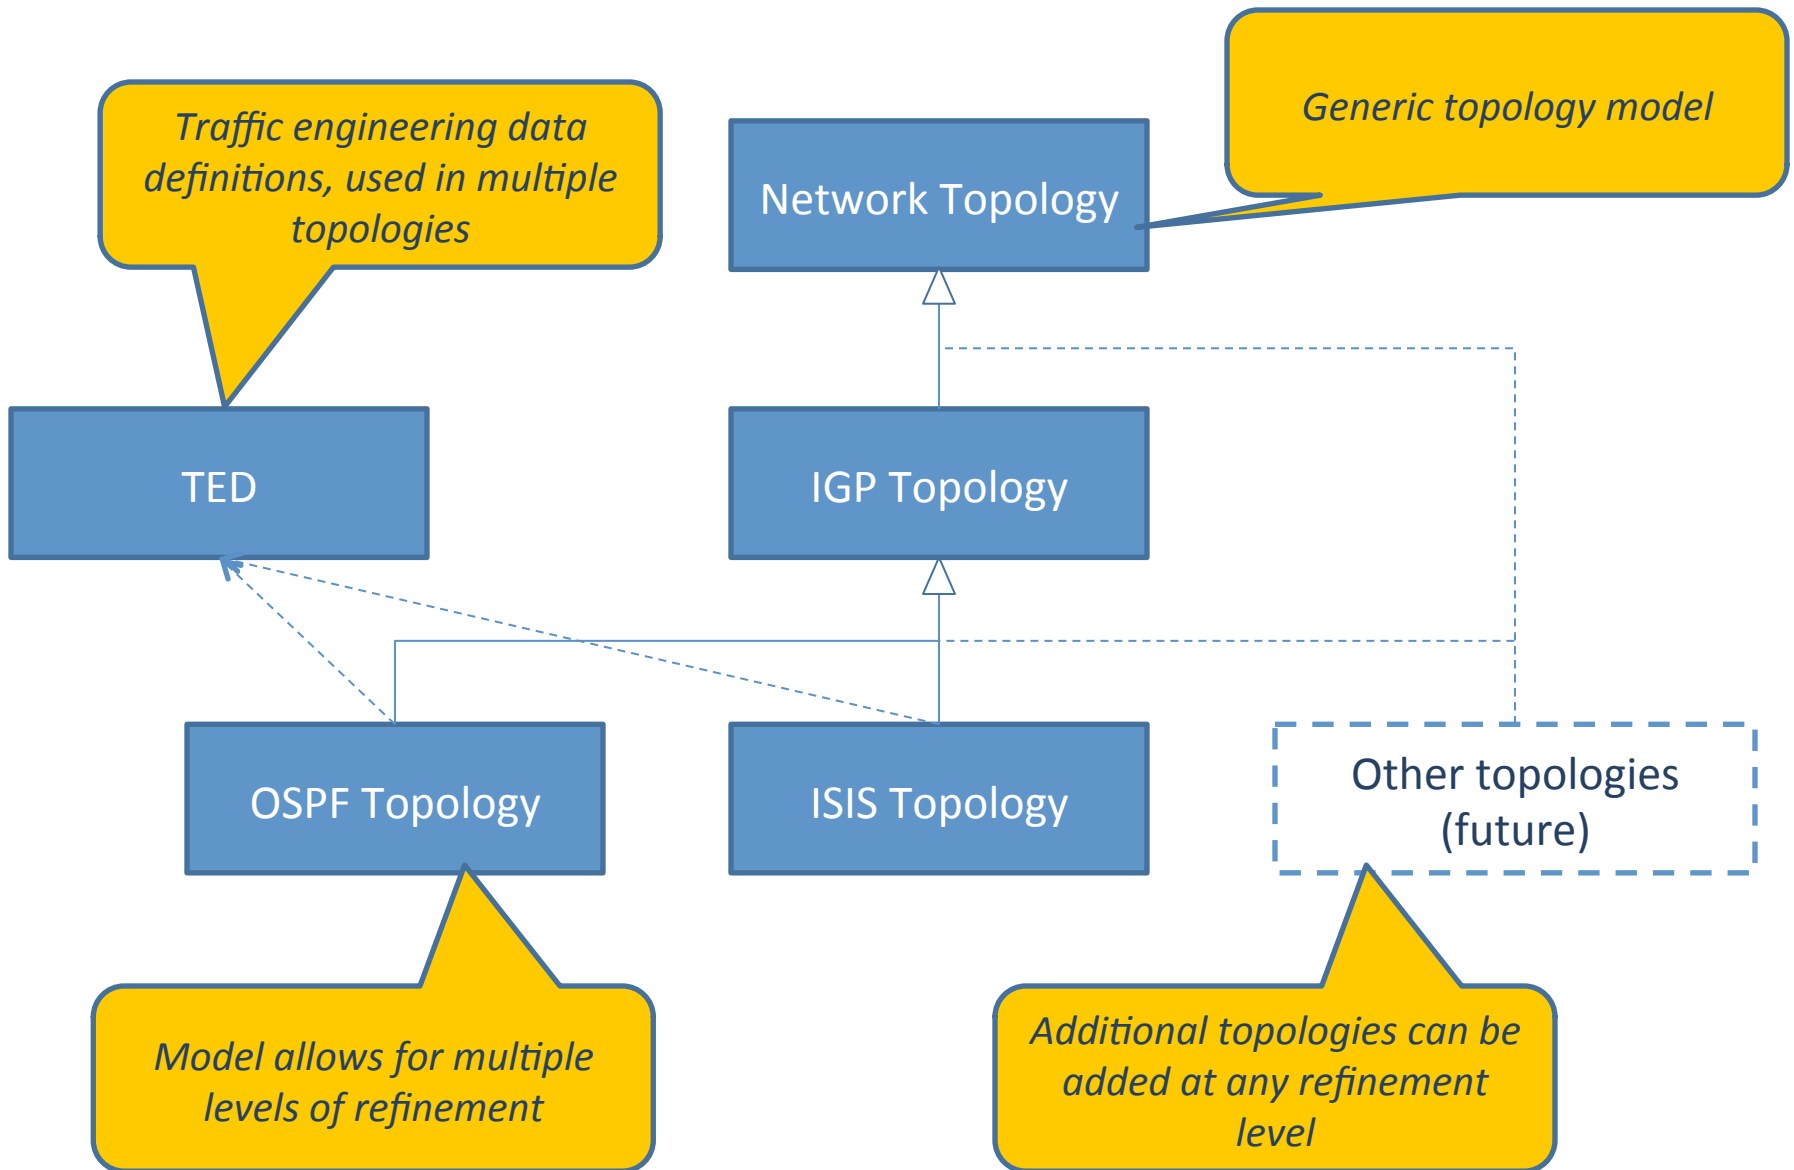

- Incorporated feedback from the WG

Info model structure

- Links connect nodes, are terminated by termination points
- Topologies can refer to underlay topologies
- Links can refer to underlay links
- Nodes can refer to underlay nodes
- Unidirectional, point-to-point links
represent non-ptp through hierarchies of nodes links

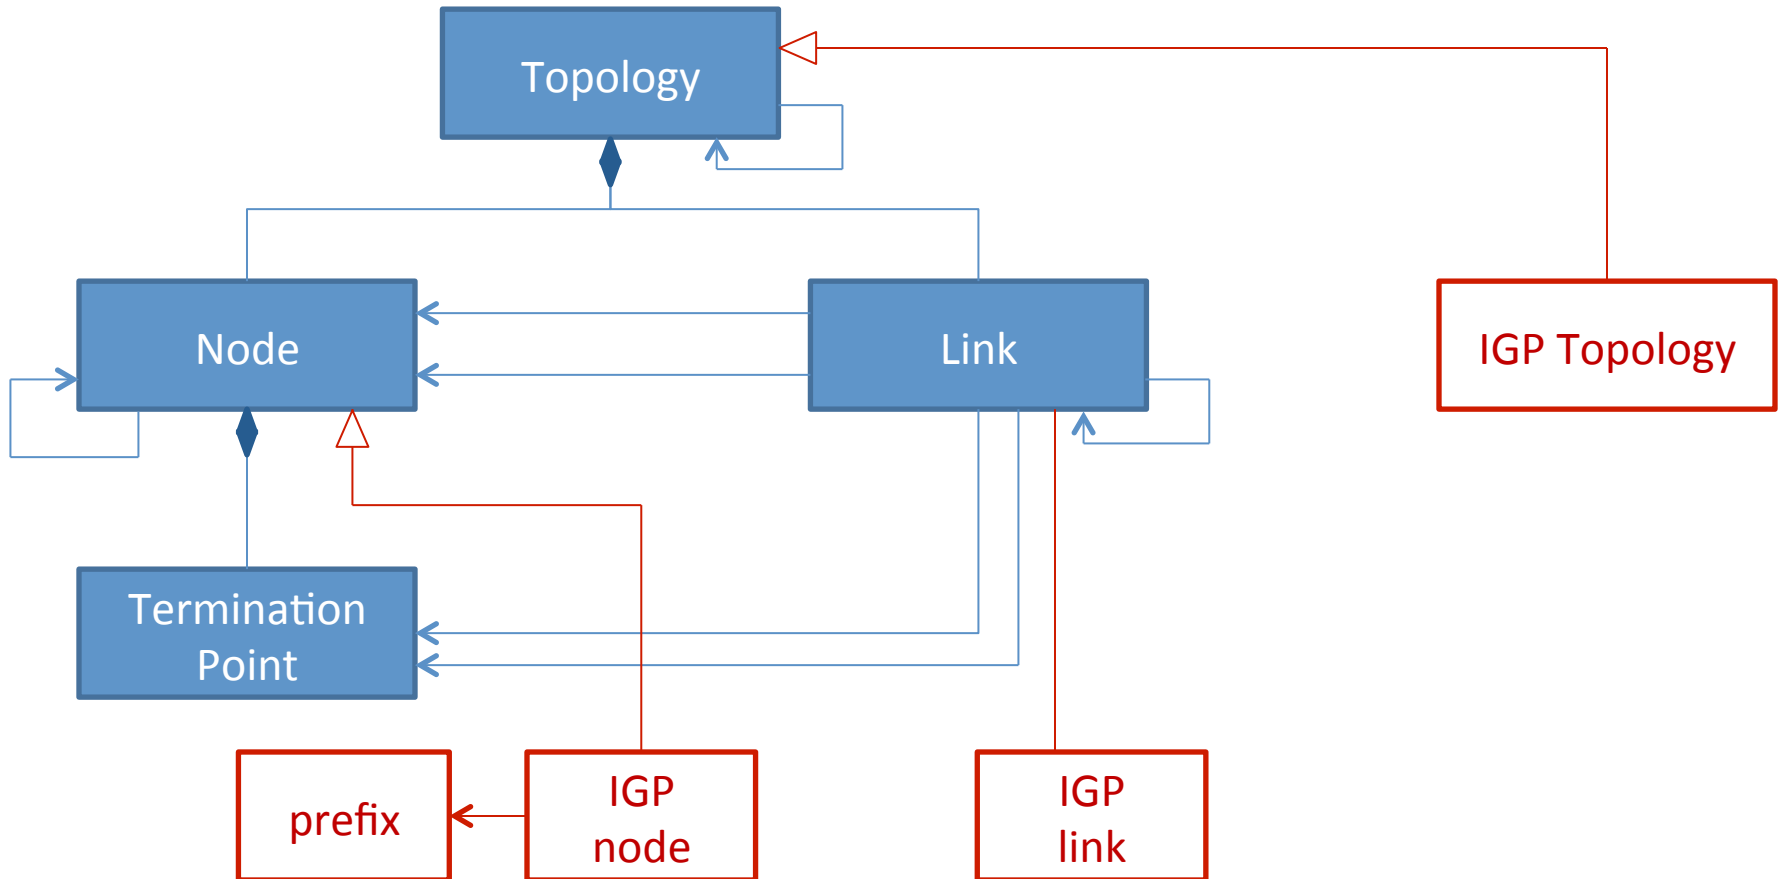

Info model structure (contd.)

Questions?

Backup

Infomodel structure (contd.)

- Derive IGP topology model elements
- Integrity rules ensure links, nodes, topology of matching type

Info model structure (contd.)
