RESTENA

draft-ietf-radext-dynamic-discovery-08

Document status

- -08 submitted a week before cutoff

- resolved all open issues (tracker & ML)

- no further comments for -08 since

- another WGLC needed?

- or proceed towards publication ?

Category : EXP vs STD ?

- document is planned to become EXP
- can't help but contemplate that
  - RADIUS discovery document much more thorough than Diameter equivalent
  - RADIUS mechanisms in public use, Diameter ones 'probably' ?
  - And yet, Diameter discovery is standards-track, while RADIUS is only experimental
- okay like that ?
