

# NAI (4282bis)

RADEXT - IETF 88

# Main sticking point

- Normalization done at the edge or the core?
- We know we can do it at the edge.
  - But no one does it: upgrade 1B devices
- It's easier at the core (1000s of proxies)
  - But we don't know if it's possible

# Feedback from i18n

- Very little feedback from i18n people
- It may be possible, may not
- To do this week: get feedback from i18n
- Submit for publication

# Discussion?
