

RTP Topologies

draft-ietf-avtcore-rtp-topologies-update-02

Stephan Wenger

Situation

- Only one known open issue: alignment with grouping taxonomy (draft-ietf-avtext-rtp-grouping-taxonomy-02). Significant overlap
- Both are meta-documents that most likely will have to be updated more over the lifetime of RTP
- No on-the-wire impact
- On 6/11/2014, Bo Burman posted his review of Topologies, with a list of 10 alignment issues
- None of those appear to be directly related to the difficult issues discussed in the avtext session (7/22/2014)

Questions and Options

1. Who needs Topologies? When?

1. Avoid referencing Taxonomy. Address Bo's open points as good as we can, now. Last call Topologies after these edits

1. Wait for Taxonomy. Align with the following version
 - (a) Wait for WG-LC version of Topologies.
 - (b) Wait for IETF-LC version of Topologies
 - (c) Wait for Topologies RFC
