Collective responsibility and collaboration for Routing Resilience and Security

Routing Resilience Manifesto
Objectives

• Raise awareness and encourage actions by demonstrating commitment of the growing group of supporters

• Demonstrate industry ability to address complex issues

• Clear and tangible message:

  “We do at least this and expect you to do the same”
Routing Resilience Manifesto

- Principles of addressing issues of routing resilience
  - Interdependence and reciprocity (including collaboration)
  - Commitment to Best Practices
  - Encouragement of customers and peers
- Guidelines indicating the most important actions
  - BGP Filtering
  - Anti-spoofing
  - Coordination and collaboration
- High-level document specifying “what”
  - “How” is in external documents (e.g. BCPs)
The end product

• Landing page
• Published document
• Growing list of supporters
• Pointers to more specific information, e.g. BCOPs
Work in progress

• A small group of network operators drafting text
• ISOC as a neutral platform (convener and promoter)
• Draft document is published, feedback is welcome and needed!
• [http://www.routingmanifesto.org](http://www.routingmanifesto.org)
L9 - Principles

• 1) The organization (ISP/network operator) recognizes the interdependent nature of the global routing system and its own role in contributing to a secure and resilient Internet

• 2) The organization integrates best current practices related to routing security and resilience in its network management processes in line with the Guidelines

• 3) The organization is committed to preventing, detecting and mitigating routing incidents through collaboration and coordination with peers and other ISPs in line with the Guidelines

• 4) The organization encourages its customers and peers to adopt these Principles and Guidelines
Guidelines – 3 requested actions

1. Prevent propagation of incorrect routing information
2. Prevent traffic with spoofed source IP address
3. Facilitate global operational communication and coordination between the network operators
Guidelines – requested actions

Prevent propagation of incorrect routing information

Network operators are encouraged to define a clear routing policy and implement a system that ensures correctness of their own announcements and announcements from their customers to adjacent networks with a prefix and as-path granularity. Network operators should be able to communicate to their adjacent networks which announcements are correct.

21 August 2014
Guidelines – requested actions

Prevent traffic with spoofed source IP address

Network operators should implement a system that enables source address validation for at least single-homed stub customer networks, their own end-users and infrastructure. Network operators are encouraged to implement filtering to prevent packets with incorrect source IP address from entering and leaving the network.
Guidelines – requested actions

Facilitate global operational communication and coordination between the network operators

*Network operators should maintain globally accessible up-to-date contact information.*
Next steps

• Solicit wider feedback from the community
  – Language should be clarified (soudl, encouraged, etc.)
  – Better name?
  – References to BCPs are missing – input appreciated

• Finalize the draft – please visit the site and submit your comments

• Launch and promote
Questions

• Are you interested in contributing?
• Will you support the Manifesto?
