draft-ietf-ecrit-additional-data-24

IETF 91 ecrit WG — 13 November 2014
slides v1 — 12 November 2014

Purpose of draft

- Establishes a mechanism for transferring related data with an emergency call

- A general mechanism for transferring specific, registered and identified blocks of data, each as a MIME body part or HTTPS

- Creates a set of such blocks to accommodate expected emergency call usage

2

Reviewer Acknowledgment

- We received review comments from:
    - Guy Caron (all addressed in -23)
    - Keith Drage (all addressed in -23)
    - Chris Santer (some addressed in -24)
    - Archie Cobbs
- All remaining issues will be addressed in -25
- Thank you!

- Please review! -- It's much appreciated☺

- Further reviews always helpful

Draft Status

- Issues identified since WGLC have been minor technical errors (e.g., not all occurrences of 'id' were changed to 'DataProviderReference', some cases where schema doesn't match text and examples)

- Remaining issues will be addressed in -25

- -25 will go to IETF LC
