draft-ietf-ecrit-car-crash-01

IETF 91 ecrit WG — November 2014
slides v1 — 7 November 2014

Purpose of draft (1)

- Describe how IETF mechanisms are used for emergency calls placed by vehicles

- Automatic Crash Notification (ACN)

- ACN is a term for vehicle-initiated emergency (interactive) calls with crash data

  - Means both automatically-initiated (e.g., because of crash) and manually-requested

Purpose for Draft (2)

- Describes different models in use now and after migration to Next-Generation (all-IP)

- Describes how such calls are identified and presented to PSAP/ESInet

- Describes how crash data is attached to a call and identified by a PSAP

- Intended to be used by vehicle mfgrs/service providers and PSAPs for call recognition/handling and interoperable crash data

Draft Status

- Draft was split off from draft-rosen-ecrit-ecall (which had 11 versions)

- Fifth revision since split

- This draft is for ACN in general, not pan-European eCall
