

Draft: SASL/OAuth

Presenter: Bill Mills

- Recent changes

- Various editorial small changes in -16 from WGLC feedback.

- -17

- Endpoint discovery and dynamic client registration SHOULD be supported in the general case for interoperability. Left outside the scope of this spec but noted here.

- Recommends use of the OpenID “issue” element, and “offline_access” scope as best practice.

- Minor fix on one example.

- Changelog incomplete ☹️

- Re-entering WGLC?
