Provisioning domain protocol solutions update

Suresh Krishnan, Jouni Korhonen,

Shwetha Bhandari, Sri Gundavelli

Document set

- Support for multiple provisioning domains in DHCPv6
  - draft-ietf-mif-mpvd-dhcp-support-00
  - Presented at dhc wg meeting at IETF90
- Support for multiple provisioning domains in IPv6 Neighbor Discovery
  - draft-ietf-mif-mpvd-ndp-support-00
  - Will be presented at 6man wg meeting at IETF91
- Identification of provisioning domains
  - draft-ietf-mif-mpvd-id-00

Open issues

- There are no pending issues on the DHCPv6 and the ND documents
  - We have addressed all issues raised on the documents
  - We need more reviews. Please volunteer
- Ian Farrer has raised one issue on the PVD ID document (Thanks Ian!)

PVD ID issue

- Ian does not want the PVD ID field to have different formats
  - He believes that a single format with high level of probabilistic uniqueness is the way to go.
    - One such example would be UUID (ID type 0x01)
- What does the WG think?
  - Do we want a single format or keep multiple formats
