

Token Introspection

November 2014 / IETF91

Justin Richer

Current Draft

<https://tools.ietf.org/html/draft-ietf-oauth-introspection-00>

What is it?

- PR says: “I got a token, I need an adult”
- JSON object answers questions about token:
 - Is it still active?
 - Who was it issued to?
 - Who authorized it?
 - When was it issued?
 - When does it expire?
 - What scopes does it carry?

Rough Consensus

- Has been stable for years
- Inherits JWT claim names and semantics where appropriate
- Multiple specification dependencies
 - UMA
 - HEART

Running Code

- Multiple running implementations
 - Different languages
 - Different platforms

Next steps

- Send to Working Group Last Call
 - It's stable and done (and has been for years), let's ship it now
 - It's already running in production
 - Several specs (UMA, HEART) depend on it
 - Alternatives can be developed later or in parallel without affecting this draft
