

draft-sidr-bgpsec-protocol

Matt Lepinski

# Revision -10

- Normative change to the validation algorithm
  - Origin validation is now completely separate
  - BGPsec validation can now return “Valid” even when origin is invalid
- Added reference to as-migration
  - Related to discussion of pcount field

# Open Issues

- Only issues outstanding are editorial
- Need to clean up some text in security considerations
- Is the text sufficient in describing how the BGPsec\_Path attribute is used in place of AS\_Path?

# Next Steps

- Discussion with IDR on Friday
- Editorial revision within the next two weeks
- WGLC the -11 version of the document?
