

draft-ietf-ecrit- additional-data-29

IETF 92 ecrit WG — 24 March 2015
slides v1

Purpose of draft

- Establishes a mechanism for transferring related data with an emergency call
- A general mechanism for transferring specific, registered and identified blocks of data, each as a MIME body part or HTTPS
- Creates a set of such blocks to accommodate expected emergency call usage

Recent Changes

- Comments regarding XML schema bugs and discrepancies between schema, text, and examples from Archie Cobbs and Dan Banks
- Versions -28 and -29 fixed and clarified:
 - All MIME types OK (not just Application/)
 - By value not suitable for very large blocks
 - Usable in SIP methods where body is OK
- Please review! -- It's much appreciated 😊

Draft Status

- IETF Last Call requested
