IETF-92 March, 2015, Dallas

Problem Statement

- OWAMP and TWAMP allow only use of 64 bit-long NTP time stamp format

- IEEE-1588v2 has gained wide support and now is supported by many fast forwarding engines

- Provide ability to use other than NTP time stamp format in backward compatible manner

- This proposal defines OWAMP and TWAMP extensions to enable use of 1588v2 truncated format (64 bit-long)

Updates to Control Protocols

- Use Modes field to advertise and negotiate time stamp format between Server and Control-Client

- Define two new flags:
  - NTP Timestamp Capability
  - PTP Timestamp Capability

- Timestamp Capability advertisement and negotiation procedures for OWAMP and TWAMP Control protocols defined

Update to Test Protocols

- Use Z field in Error Estimate to indicate time stamp format used by the network element:
  - 0 – NTP 64 bit-long format
  - 1 – 1588v2 truncated 64 bit-long format

S	Z	Scale	Multiplier

TWAMP Light Consideration

- Session-Sender and Session-Reflector MAY be informed, e.g. through configuration, of time stamp format to be used, according to their capabilities and rules used to negotiate time stamp format between Server and Control-Client

Next steps

- Welcome comments from the WG
- Continue work on the proposal
