

Registry for Performance Metrics

draft-ietf-ippm-metric-registry-02

M. Bagnulo

IETF92

Modifications in v02

- Removed the Performance Metric Directorate, only kept Performance Metric Experts
- Changed performance metric definition to allow for externally
- Definitions of passive and active measurements
 - We keep them for now. If AI's draft progresses before this one, we can consider removing the defs and including a pointer to the draft/RFC
- Splitted section 5. Design Considerations for the Registry and Registered Metrics into two sections one on motivations and another one on criteria for metrics
- Include an URL for the metric information in the registry for presentation purposes
 - Not in v02 but agreed

Open issues

- Definition of Filter column (passive measurements)
- Examples of passive metrics: name and definition examples
- Is there any part of the registry that should be machine parseable?
