

OAuth 2.0 Token Exchange

Michael B. Jones

March 23, 2015

IETF 92 – Dallas

draft-ietf-oauth-token-exchange

- Act-As and On-Behalf-Of functionality
 - Semantically modelled after WS-Trust
- Stable, but my sense is that people have been focused on other OAuth specs at present
 - JWT, Assertions, Dyn-Reg, PoP, SPOP, etc.
- Probably time for interested parties to sit down in person to discuss next steps this week
