

Correlating TE Topology Model with I2RS Topology Models

- Working Session – 7/20, 20:00-21:00
 - Topology Teams Meet-Up.
- Generic Network Topology Model:
 - TE Topology model will augment the generic network topology model.
- L3 Topology Model(s)
 - TE Topology need not be congruent with the Routing Topology.
 - To cater to scenarios where congruency does exist, topological elements in L3 Topology will have references to corresponding topological elements in the TE Topology.
- L2 Topology Model
 - Similar to L3, topological elements in L2 Topology will have references to corresponding topological elements in the TE Topology.
- L1 Topology Model
 - TE-Topology is an abstract representation of data-plane topology.
 - L1/L0 Topologies would directly augment the TE Topology Model.
