Considerations regarding the correct use of EAP-Response/Identity

draft-winter-radext-populating-eapidentity-01

IETF 93, Prague, CZ

Stefan Winter <stefan.winter@restena.lu>

Recap: AAA Doctors Verdict @ IETF 91

- AAA doctors met for AAA lunch at IETF 91
- Opinion : have a separate document, in RADEXT, BCP track, which « updates » (or informally references) the EAP spec (RFC3748), explaining that
 - EAP-Response/Identity really should be UTF-8 *if there is a chance that the EAP conversation will go over AAA later, or else face the consequences.*
 - Normalise in same way as NAI document suggests.
 - Iterate through all identities.

Next Steps

- New Call for Adoption needed?
 - Only significant point of friction was whether radext is the right place for the work.
 - IESG approved new charter which included this work.
- Adopt.
- Republish expired individual draft as `draft-ietf-radext-populating-eapidentity-00`
- Publish -01 very soon with the AAA Doctors' suggested changes in.
