SACM Requirements

7/24/2015

Lisa Lorenzin

Status

- Currently have zero open issues in github (hooray!)
- requirements-09 addresses 9 issues discussed & consensus reached during the working sessions on 7/21 and 7/23
  - #2, #3, #7, #38, #47, #48, #49, #52, #53
- Can walk through changes if desired
  - Several were terminology adjustments / wordsmithing for clarity
  - A few text additions / relocations

Next Steps

- Short-term – new WGLC
- Long-term – propose to hold requirements draft after WGLC closes
  - Do not submit for publication - keep stable I-D representing our intent
- Benefits
  - Gives us flexibility to update the requirements as we complete the work on the information model and consider transport protocols / data models
  - Allows us to ensure that when we do approve a transport protocol / data model, all of our documents are aligned
- Detriments
  - Delays published requirements RFC – downsides?
