

**-dnssec-chain-extension**

# +DNSSEC –port53

DNSSEC is an OK delegation hierarchy

DNS protocol has last-mile and latency issues

=> pass DNSSEC chain in a TLS extension

(cf. OCSP stapling)

```
struct {
    opaque rrset<0..2^16-1>;
    opaque rrsig<0..2^16-1>;
} RRset

// MUST be in auth'n order
// Like cert chain
RRset AuthenticationChain<0..2^16-1>;
```
