

-similar-location

Brian Rosen, Neustar

Summary

- Defines a way to return Location Information in a `<findservice>` response.
- Two uses
 - Provide missing fields if LI in request is valid, but not complete
 - Used when validating location during provisioning of a LIS
 - Request might have enough info to determine a unique location, but not in the form the addressing authorities want it
 - Provide alternatives when location in request is not valid (“Did you mean?”)

Status

- NENA/EENA does need this
- Please adopt
