

RECURSIVE MONITORING LANGUAGE IN NETWORK FUNCTION VIRTUALIZATION (NFV) INFRASTRUCTURE DRAFT-CAI-NEVRG-RECURSIVE-MONITOR-00

NFVRG @ IETF 94 YOKOHAMA

Xuejun Cai Catalin Meirosu Gregory Mirsky

OVERVIEW

Motivation:

- provides an automatic way to decompose/aggregate monitoring data in different infrastructure layers
- provide a way for developers and operators to easily access monitoring data collected from resources in a software-defined telecom infrastructure that contains a hierarchy of abstraction levels

Solution proposal:

- Define a query language based on an extended Datalog syntax
- Include pre-defined templates for initial metrics examples
