

A Multilingual Content Type

Nik Tomkinson

Nathaniel Borenstein

I-D: draft-ietf-slim-multilangcontent-00

Recent comments and work

- the inner parts could be message/rfc822
- but better, they should be message/global
- there is a possible risk of impersonation
- security considerations was lacking
- lazy spam filters may be an issue
- security considerations have been rewritten
- maybe multiple language-independent images

What's left to do?

- More testing with message/global for legacy clients, we just need volunteers.
- Re-write the document detailing the new message/global structure
- Incorporate the updated Security Considerations section to include spam filters concern and impersonation concerns.
- All discussion will be within SLIM working group on the slim@ietf.org list
